

KAMESH M P

Software Engineer II | Java | Spring Boot | Microservices | React.js | Kafka | Kubernetes

Chennai, India | +91 8695999876 | mpkamesh187@gmail.com |

LinkedIn: <https://www.linkedin.com/in/kameshmp/>

Professional Summary

Software Engineer with 5+ years of experience building scalable enterprise applications for banking and fintech domains. Strong expertise in Java, Spring Boot, Microservices, Kafka, REST APIs and SQL, with hands-on experience in React.js for full-stack application development. Currently serving as Module Lead, leading a team of 3 engineers across development, code reviews, mentoring, client collaboration and sprint delivery. Experienced in Docker, Kubernetes, Jenkins, ArgoCD and cloud-native deployments. Improved backend performance by 30%+, reduced database latency by 25–30%, and supported 99.9% application availability.

Technical Skills

Java 8/11/17, Spring Boot, Spring Security, React.js, Kafka, ActiveMQ, REST APIs, Microservices, SQL, PostgreSQL, MySQL, Oracle, Docker, Kubernetes, Jenkins, ArgoCD, AWS, Azure, Git, Maven, JUnit, Swagger, Postman.

Professional Experience

Module Lead | Sopra Steria | Jun 2025 – Present

- Lead a team of 3 engineers by assigning work, conducting code reviews, mentoring developers and ensuring sprint delivery.
- Develop scalable **Java Spring Boot microservices and REST APIs** for financial workflows using Kafka.
- Develop and enhance **React.js-based frontend components** to integrate with backend REST APIs and deliver end-to-end business functionality.
- Integrate React.js applications with Spring Boot APIs for data retrieval, validation and transaction workflows.
- Collaborate directly with clients to understand requirements and translate them into backend and frontend solutions.
- Contribute to solution design discussions, technical architecture reviews and application development.
- Build and deploy Dockerized microservices on Kubernetes and support cloud-native deployments.
- Improve CI/CD pipelines using Jenkins and ArgoCD for automated application builds and deployments.
- Reduced production database latency by **30%+** through SQL optimization, query tuning and indexing.

- Implemented Kafka-based asynchronous processing to improve application resilience, scalability and throughput.
- Participate in code reviews, release activities, production support and troubleshooting of production issues.

Associate Consultant | Intellect Design Arena | Aug 2021 – Jun 2025

- Developed and maintained **Java Spring Boot microservices and REST APIs** for digital banking and financial applications.
- Developed **React.js UI components** and integrated them with backend REST APIs for end-to-end application workflows.
- Implemented secure REST APIs using **OAuth2** and integrated frontend applications with authentication-enabled backend services.
- Used Kafka for asynchronous communication and event-driven processing across distributed microservices.
- Worked on frontend-backend integration, including API consumption, JSON data handling and error handling in React.js applications.
- Improved backend application performance by **30%** through code optimization and efficient service implementation.
- Reduced SQL execution time by **25%** through query optimization and database tuning.
- Participated in Agile ceremonies, code reviews, production support and troubleshooting of application issues.
- Collaborated with cross-functional teams to analyze requirements, implement features and deliver production-ready solutions.

Key Achievements

- Led a team of 3 engineers through sprint execution, code reviews and mentoring.
- Improved backend performance by 30%+.
- Reduced database latency by 25–30%.
- Maintained 99.9% application availability.

Education

B.Tech – Software Engineering
SRM Institute of Science & Technology (2017–2021)
